Subject: Accountabilities for key 'modules' of Total Exposure pilot study

Dear All,,

We are initiating the pilot study for the TES with COVANCE as the CRO executing this complex project outside of PM.

In order to ensure a clear accountability for the key project modules which are being worked on now, I have asked the following colleagues to be responsible for our contributions to the study progress ("to-go-to persons"):

- Establishment and validation of analytical assays (biomarkers of exposure and effect) both in the US and European facilities involved: Robin Kinser
- Development and validation of the Smoke-exposure related questionnaire and diary: Bettie Nelson
- Development and review (internal and external) of the study protocol: Jan Oey

In addition Robin, Bettie, Jan and Richard Carchman together with me will form a 'Core TES team' to address any decisions that need to be made on the pilot study as we go forward. For this Core Team it is essential that they are in the same continent as the CRO and relatively accessible quickly from Richmond.

All 4 will interact with multiple internal and external resources involved in the execution of this important study. I would like to ask all of you to support our colleagues in their important function.

Please let me know, if you have any suggestions or questions.

Best regards,
Roger
